Renew™

Resurfacing & Repair of Acoustical Ceiling Panels

Technical Data sheet

Description.

Renew™ is a proprietary service that renews soiled, stained or damaged acoustical ceiling panels without the time, financial and environmental costs associated with replacement.
Ceiling panels are resurfaced on site or removed to Asona's factory for resurfacing with new Sonatex™ acoustic facings or vacuum laminated with washable vinyl film for hygiene areas.

Application.

Renew™ is ideal for commercial building owners and facility managers who wish to upgrade their suspended ceilings in offices, healthcare and educational facilities, retail etc

Benefits.

- Reduces construction waste going to land fill
- Reuses and recycles suspended ceiling panels
- Helps minimise the buildings carbon foot print
- Increases light reflection of the ceiling for better use of
- natural and artificial lighting, a brighter interior improves energy efficiency, employee comfort and productivity.
- Retains acoustic performance rating and panel accessibility
- Saves on repair and maintenance costs
- Extends ceiling panel usable life cycle time.
- Made locally so transport and embodied energy costs are low compared to replacement with new imported panels
- Onsite application by trained team of installers
- Quick turn around times, save on shut down costs
- Choice of mat white or fine texture paint finish as standard
