Top: Asona Triton 25, custom size 1650 x 1200 mm panels on TFX tissue faced grid help express the exposed beams

In this recent fitout the original suspended ceiling was removed to expose the structural floor beams. To control room acoustics in this open plan office custom sized Asona Triton 25 acoustical panels were installed between beams supported on a matching finish TFX grid.

Panels were supplied to site with a removable plastic film which helped keep panels clean during handling by sprinkler and electrical sub trades. The plastic film was removed on completion to reveal a clean monolithic ceiling
