

Knauf Revo Access Hatches™

Perforated & non-perforated hatches

Technical Data sheet

asona

Description.

Metal framed REVO access hatches for installation in Knauf acoustic plasterboard ceilings. Designed for cladding thicknesses of 10 and 12.5 mm, consisting of an anodised aluminium frame with openable and fully detachable hatch, flush bonded face board made of Knauf acoustic plasterboard (200 x 200 mm up to 625 x 625 mm), screwed in Knauf acoustic board with trimmer profiles (> 625 x 625 mm up to 900 x 900 mm) and a self-activating drop catch.

Application.

To be used with Knauf acoustic plasterboard ceiling linings & tiles where concealed access hatches are required to access buildings services. Suitable for all commercial public areas such as offices, retail centres, schools, hospitals, conference halls and hospitality spaces.

Composition.

Hatch cover panel inserts manufactured from reinforced plasterboard containing dehydrated zeolite and gypsum with grey sound absorption felt fixed on the back. Frames made from anodised aluminium.

Benefits.

- Lies totally flush with Knauf-Danoline acoustic ceiling linings & tiles.
- No jointing of the covers required.
- Small opening displacement of the lock.
- Low installation depth in the cavity.
- Can even be retrofitted.
- Self-activating drop catch.
- Available in various sizes.
- Made in Germany to the highest specifications.
